# Introduction

Niet afwachten, maar proactief aan de slag gaan. Dat is hoe Van Wijnen Deventer B.V. omgaat met de nadere invoering van de Wet Kwaliteitsborging. Het bouwbedrijf draait een aantal pilots om ervaring op te doen met de toekomstige regelgeving.

Voor bouwbedrijf Van Wijnen is het niet meer dan logisch om nu al 'live' te gaan: vertaalt projectleider Wilbert Hilverda. De Wet Kwaliteitsborging is een verlostak van waar Van Wijnen altijd al naar streeft, namelijk een optimale kwaliteit voor de klant. We willen niet wachten tot het moment daar is, maar klaar zijn als het zover is. Ons doel is om uiteindelijk met zo min mogelijk inspanning en zoveel mogelijk plezier de kwaliteit te kunnen borgen en verbeteren."

**Extra ogen**

Een van de pilotprojecten is het, in-middel, opplevende, woningproject Landbouwmarken in Deventer. "We zijn hier met kwaliteitsborging omgegaan zoals het straks ook zal gaan, met

**Digitale tool**

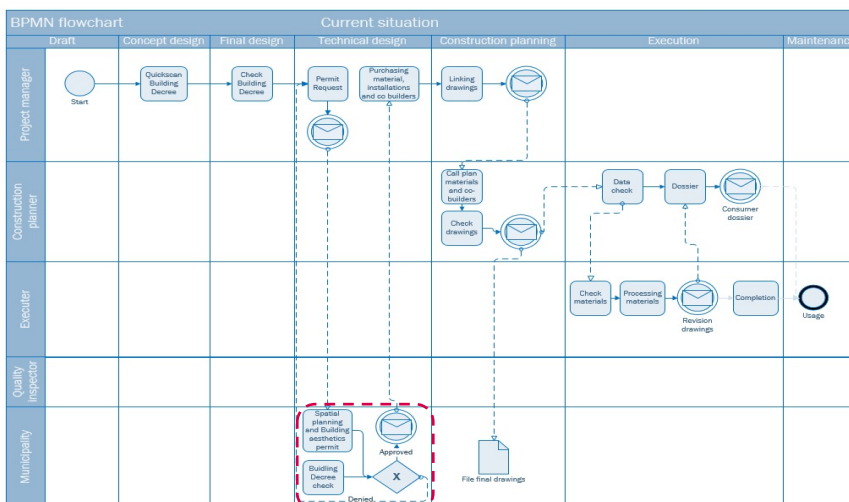

De belangrijkste les uit de pilots: zorg ervoor dat je kwaliteitsborging meteen zo optimaal mogelijk inbrengt. "Bij bewust van waar je mee bezig bent

en doe het vanaf het begin goed. ED Controls is voor ons de juiste keuze gebieden om kwaliteitsborging vorm te geven. Deze digitale tool kan heel goed ingezet worden om zaken vast te leggen, te communiceren en snel te anticiperen op veranderingen. Consumenten waarmee werken geeft rust in het proces."

Hilverda ziet de toekomstige regelgeving niet als belemmering, maar als kans. "Door bewust bezig zijn met kwaliteit kom je tot een beter product en een proces dat op een hoger niveau ligt. Dit leidt uiteindelijk tot reductie van de zo bekende faalkosten. In een tevreden klant komt altijd bij je terug."

# Current situation

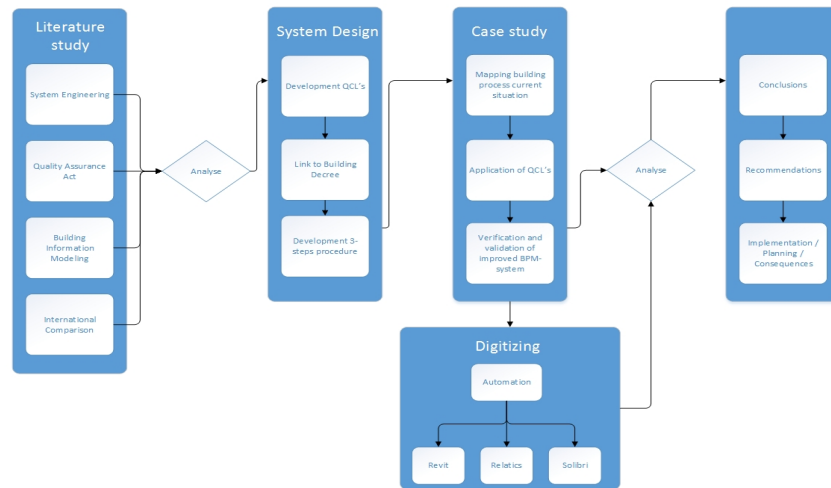

## Problem definition

- Law
  - Influence on construction process
  - Effective and efficient
- What is needed?
- Important changes
  - Municipality does not longer check construction plans according to the Building Decree
  - In stead of checks up front, now as-built statement

## Research question

***Is it possible with systems engineering (SE) and Building Information Modeling (BIM) to efficiently deliver an as-built statement which the independent quality inspector can present to the building permit holder under the Quality Assurance Act for construction (Wkb)?***

## Research model

## Quality Assurance Act (Wkb)

- **Starting point**
- **Cause of the new law**
  - **VROM**
- **Three parts:**
  - **The amendments to the Environmental Licensing (General provisions) Act (WABO)**
  - **The Housing Act (WW)**
  - **The Civil Code (BW)**

## International Comparison

Table 1: Summary analyzed systems

Activities	Germany	England	France	Sweden	Netherlands <sup>5</sup>
Design Check	●	<sup>1</sup> ● ○	●	●	●
Construction Check	●	<sup>1</sup> ● ○	●	●	●
Permit to use	○	○	<sup>2</sup> ○	○	<sup>4</sup> ●
Supervision plan	-	-	●	●	●
Supervision plan check and permit	-	-	○	●	-
Qualifications designers and contractors	●	●	●	●	-
Qualifications check systems	-	-	-	-	●

Legend	
●	Private
●	Mix
○	Public

Remarks:  
<sup>1</sup>: Choice between private or public inspection  
<sup>2</sup>: Only high-rise and public buildings  
<sup>3</sup>: New system (Wkb)  
<sup>4</sup>: Obligated as-built statement

## Systems Engineering

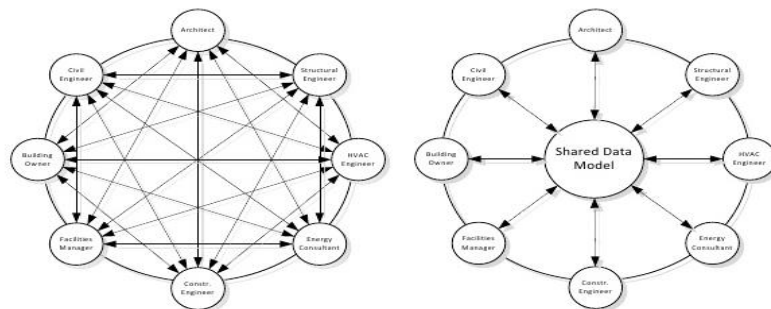

- Structured specification and design method
- Not common in housing
- Focus on the consumer
- Verification Validation

Source: (Kossiakoff, Sweet, Seymour, & Biemer, 2011)

## Building Information Modeling

- Digital support in design and execution phase
- Goal is to improve the communication between involved parties
- In development (not complete yet at construction company)

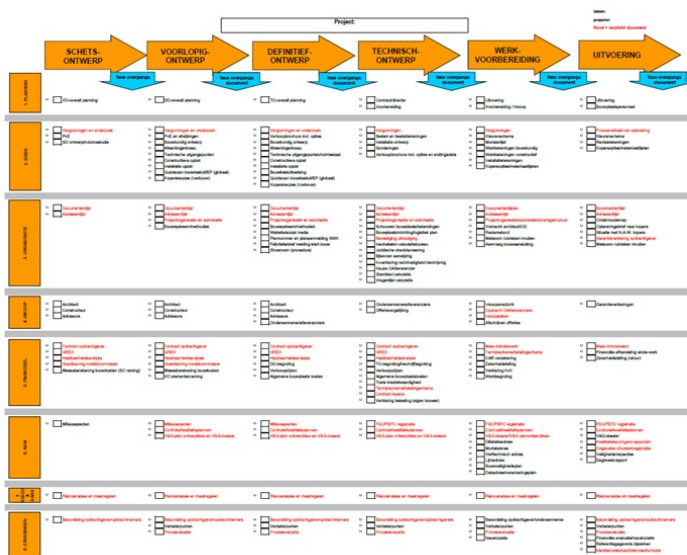

Source: (Beetz, Berlo, Bos, Hendriks, & van Tongeren, 2012)

## System Design

- **Goal:**
  - Fit in the current building process management system at Van Wijnen
  - Connect to the instrument of SWK
- **Design**
  - 3 steps:
    - Step 1: BPM matrix
    - Step 2: QCL
    - Step 3: CP

# Building Process Management System

## Step 1: BPM matrix

	1 - DRAFT	2 - CONCEPT DESIGN	3 - FINAL DESIGN	4 - TECHNICAL DESIGN	5 - CONSTRUCTION PLANNING	6 - EXECUTION	7 - MAINTENANCE
1 PLANNING							
2 REQUIREMENTS							
3 ORGANIZATION							
4 PROCUREMENT							
5 FINANCIAL							
6 RISK							
7 RISKS AND PRIORITIES							
8 EXPERIENCES							

## Step 2: Quality Checklists

- Related to the Building Decree

QCL 301: Façade locks (windows frames)								
N.	Phase	Building Decree article	Component	What	How / Norm	Who	With what	When
5	4	2.2 / 2.4	Calculation lintels (supplier)	Requirements: Do not collapse	<a href="#">NEN-EN 1990</a> & <a href="#">1992-1996</a>	Constructive assessor	Check calculation	
6	5	5.3	Thermal transmittance (U-window)	Requirement: $U_{\text{window}} \leq 1,65$ (c.q. requirement EPC) W/m <sup>2</sup> K and Cf BRL 0801	<a href="#">NEN 1068/</a> KV + delivery receipt	Work planner (constructor)	<a href="#">CP 303</a>	
7	5	5.3	Manufacturing window frames & doors	<a href="#">Cf BRL 0801</a>	KV + delivery receipt	Work planner (constructor)	<a href="#">CP 303 + 304</a>	

## Step 3: Control Protocols

Van Wijnen Deventer  
 Project :  
 Location :

CP303 Synthetic windows frames

Projectnumber :  
 Drafter :  
 Date :

Component	Approval			Clarification/action	Handled
	Y	N	N/A		
<b>General (phase 4)</b>					
KOMO-certificate present					
Is the 'polittekeurmerk' applicable					
<b>Construction planning (phase 5)</b>					
Preparing and monitoring drawing procedures					
Sampling hinges and locks i.c.w. assembly by manufacturer					
Protecting windows during execution phase					
Planning en routing discussed					
Making and checking windows frames					
Dpc foil applied on windows frames					
Measuring syntactic window frames					
<b>Execution (phase 6)</b>					
Supply check windows frames					

## Result

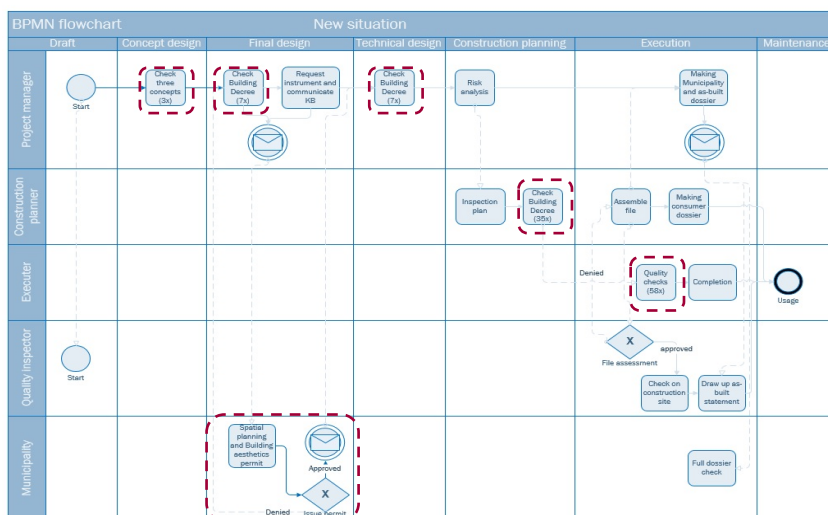

- 10 Quality Checklists
- In total 110 checks during the building process

QCL	SO	VO	DO	TO	Construction Planning	Execution
000		3			1	
100			1		1	5
102			1			6
104				1	2	3
200			3		2	5
300					6	4
301			2	2	5	5
400				1	9	5 (+2) <sup>4</sup>
500					7	15
600				3	2	10
TOT	0	3	7	7	35	58

## Result

	1 - DRAFT	2 - CONCEPT DESIGN	3 - FINAL DESIGN	4 - TECHNICAL DESIGN	5 - CONSTRUCTION PLANNING	6 - EXECUTION	7 - MAINTENANCE
1 PLANNING							
2 REQUIREMENTS							
3 ORGANIZATION							
4 PROCUREMENT							
5 FINANCIAL							
6 PLAN	VERIFICATION PROGRAM OF REQUIREMENTS	3 CHECKS IN QCL 001	7 CHECKS IN QCL 100 102 200 300	7 CHECKS IN QCL 104	35 CHECKS IN QCL 001 100 301 101 400 200 500 300 600	38 CHECKS IN QCL 100 102 104 200 300 301 400 500 600 AS-BUILT STATEMENT 60	
7 RISKS AND OPPORTUNITIES	RISK ANALYSES AND MANAGEMENT MEASURES				INSPECTION PLAN		
8 EXPERIENCES							

## New Situation

## Case study

- **Groevenbeek**
  - **Current situation**
    - Proper risk analysis
    - Not everything was recorded
    - Connection with Building Decree not clear
    - As-built statement?

# Digitizing

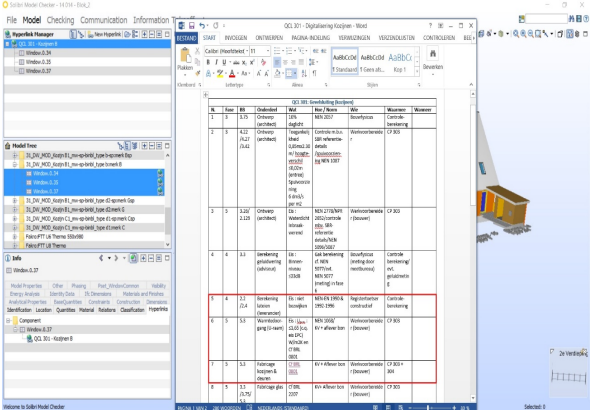

- Tools
  - Solibri
  - Revit
  - Relatics
- Automation

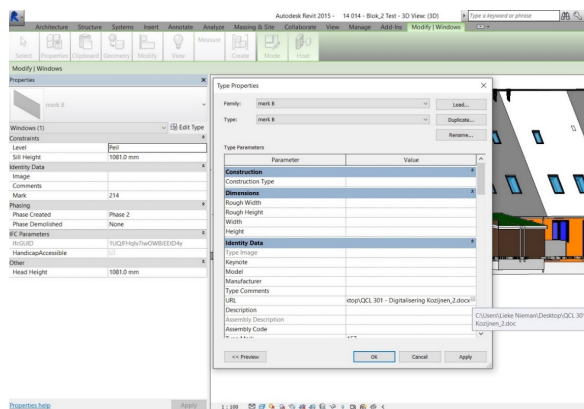

# Solibri

- Model checker:
  - Easy to link and check the drawings with a QCL

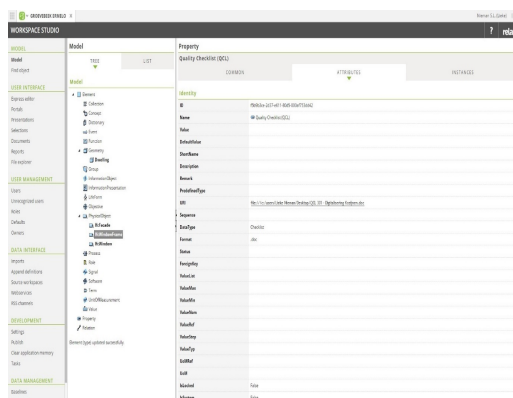

# Revit

- 3D drawing software
- Plugin

# Relatics

- Cloud platform to control all information within a project
- A bit cumbersome because not full access to the platform

## QCL linked to CP

QCL 301: Façade locks (windows frames)								
N.	Phase	Building Decree article	Component	What	How / Norm	Who	With what	When
5	4	2.2 / 2.4	Calculation lintels (supplier)	Requirements : Do not collapse	NEN-EN 1990 & 1992-1996	Constructive assessor	Check calculation	
6	5	5.3	Thermal transmittance (U-window)	Requirements : $U_{wq} \leq 1,65$ (c.q. requirement EPC) W/m <sup>2</sup> K and CE BRL 0801	NEN 1068/ KV + delivery receipt	Work planner (constructor)	CP 303 ↑	
7	5	5.3	Manufacturing window frames & doors	CE BRL 0801	KV + delivery receipt	Work planner (constructor)	CP 303 + 304	

CP303 Synthetic windows frames

## Conclusion

**Systems Engineering in conjunction with a BIM-system is a prerequisite to efficiently and effectively deliver the by the Wkb required as-built statement. The developed quality assurance system can theoretically be used without digital support. The costs (time spent) will be high with the risk that checks will be omitted, in which case the independent KB needs to spend extra time (costs).**

## Risks

- **Decrease in innovations**
- **Higher costs**
- **Bureaucracy**

## Recommendations

- **The application of SE would connect very well to effectively and efficiently secure quality for the new quality assurance law**
- **Relatics**
- **Automation is important**
- **Prevent bureaucracy**
- **Pay attention to the creation of support**
- **Take your time for implementation, but start today**

## Planning for implementation

***The new system is a step towards a more modern industry which produces sustainable, healthy, useable and safe buildings for its customers. An industry that produces flawless, listens to its customers and where 'you' would like to work with***

## Questions
